Queclink's GMT200 Helps Recover Stolen Motorcycles

In Hong Kong, motorcycle theft has been a problem haunting the police. To address the problem, a Hong Kong-based company has launched an anti-theft system TRAKBIKE with Queclink's GMT200 at its core.

Since the launch of GMT200, the compact motorcycle GPS tracker has enjoyed popularity among customers by safeguarding their vehicles. In Hong Kong, motorcycle theft has been a problem haunting the police who received 204 and 126 reports in 2013 and 2014, respectively. To address the problem, a Hong Kong-based company has launched an anti-theft system TRAKBIKE which employs Queclink's GMT200.

TRAKBIKE has benefited several motorcycle owners. Mr. Xu is one of them. One year ago, Mr. Xu parked his motorcycle HONDA NC700S at an alleyway besides Huaxin Street in Hung Hom Ferry Piers. The disk lock did not scare off the thief who drove away in motorcycle. The device GMT200 sent the first alarm at 00:38 am to the mobile phone of Mr. Xu followed by motion

alarm, ignition on alarm, ignition off alarm, etc. However, Mr. Xu did not get the alarm until next morning as he had turned off his phone that night. He called the police after finding that his motorcycle had gone. Fortunately, he knew clearly where his motorcycle was, thanks to GMT200. In half an hour, Mr. Xu recovered his stolen motorcycle with the help of the police.

To the police's delight, they found another two stolen motorcycles in the same place. One of the motorcycles is TRIUMPH SPEED TRIPLE 1050 belonging to the French Mr. Fabrice.

The recovered motorcycle was a pleasant surprise for Mr. Fabrice who had given up recovering it. After learning from the police that the recovery was owed to TRAKBIKE, he had his motorcycle outfitted with the system. It turned out that the decision is a wise one. The system demonstrated its value again last October. At 6:00 am, he found that his motorcycle was driven to Sha Tin from Wan Chai on the mobile phone. At that time, he was in Taiwan and more than two hours had passed since the device sent out the first alarm. He transmitted location data to his friend in Hong Kong who called the police on his behalf. The police was very efficient and recovered the motorcycle at around 9:00 am.

In an era characterized by rapid changes in science and technology, traditional anti-theft tools like disk lock cannot meet the needs of motorcycle owners any more. Hi-tech devices boasting better anti-theft and recovery features will soon dominate the market. Queclink's GMT200 is a GPS tracker designed for motorcycles, sporting covert installation, accurate positioning and stable performance.
